IN THE CLAIMS:

Please amend claims 13, 19 and 22, as follows:

1-12. (Cancelled)

13. (Currently amended) Catheter for the radiofrequency ablation of tissue, having a

pointed tip for piercing insertion into said tissue, comprising at least one pair of bipolar

electrodes adapted to functioning in bipolar mode, each bipolar electrode comprising supply

channels adapted for the perfusion of saline solution around the electrodes, the catheter further

comprising at least two end electrodes arranged towards opposed ends of the catheter, on either

side of the pair of bipolar electrodes, said end electrodes adapted to functioning in monopolar

mode.

14. (Previously presented) Catheter according to claim 13, wherein each bipolar

electrode comprises at least two saline solutions supply channels (14a, 15a; 14b, 15b).

15. (Previously presented) Catheter according to claim 13, wherein the liquid supply

channels with outlets (15a, 15b) arranged proximate the front and rear ends of the catheter are

supplied with the saline solution independently of liquid supply outlets (14a, 14b) arranged

proximate the center of the catheter.

Amendment After OA mailed February 3, 2009 Serial No. 10/591,150

(Previously presented) Catheter according to claim 13, further comprising a 16.

central electrode (8) arranged between the bipolar electrodes (4, 5), the central electrode adapted

to function in monopolar mode.

17. (Previously presented) Catheter according to claim 13, further comprising one or

more thermocouples (16), said thermocouples being retractably mounted in the catheter and

actionable so as to be inserted into tissue surrounding the catheter.

(Previously presented) Catheter according to claim 16, wherein the liquid supply 18.

channel outlets are arranged at a distance (B) from the respective central and end monopolar

electrodes, that is sufficient to avoid being in a region of coagulated tissue formed around said

monopolar electrodes.

· 19. (Currently amended) Apparatus for radiofrequency ablation of tissue comprising

a catheter having a pointed tip for piercing insertion into said tissue, comprising at least one pair

of bipolar electrodes adapted to functioning in bipolar mode, each bipolar electrode comprising

supply channels adapted for the perfusion of saline solution around the electrodes, the catheter

further comprising at least two end electrodes arranged towards opposed ends of the catheter, on

either side of the pair of bipolar electrodes, said end electrodes adapted to functioning in

monopolar mode, and at least two independently controlled pumps for supplying saline solution

to separate supply channels of each bipolar electrode.

2205729 1.DOC

20. (Previously presented) Apparatus according to claim 19, further comprising a

temperature acquisition unit connected to thermocouples of the catheter.

21. (Previously presented) Apparatus according to claim 19, further comprising an

RF generator, whereby the independently controlled pumps, RF generator, and temperature

acquisition unit are connected to a computing unit, such as a PC, for monitoring and controlling

operations.

22. (Currently amended) Method of radiofrequency ablation of tissue, comprising the

steps of:

providing a catheter having at least one pair of bipolar electrodes with saline

solution supply channels, and at least two monopolar electrodes arranged towards opposed ends

of the catheter on either side of the pair of bipolar electrodes;

inserting the catheter into a central region of the volume of tissue to be ablated;

supplying electrical power to the monopolar electrodes to coagulate tissue

therearound and seal said tissue to said catheter around the puncture performed by the catheter;

perfusing saline solution into the tissue surrounding the bipolar electrodes and

supplying electrical RF energy to the bipolar electrodes for thermal ablation.

23. (Previously presented) Method according to claim 22, wherein the step of

perfusing saline solution comprises supplying saline solution via supply channels (14a, 14b)

Amendment After OA mailed February 3, 2009 Serial No. 10/591,150 arranged proximate the center of the catheter at a concentration lower than saline solution supplied to outlets (15a, 15b) arranged proximate opposed ends of the catheter.

24. (Previously presented) Method according to claim 22, wherein prior to or during the step of operation of the bipolar electrodes, retractable thermocouples (16) mounted in the catheter are inserted at a certain depth into the surrounding tissue.
